Title : Tests for the verification of the performance of solar thermal power plants with parabolic trough collector technology.
Scope : The purpose of this standard is to provide procedures and guidelines for acceptance testing of complete parabolic-trough collector (PTC) solar thermal power plants on the uncertainty level given in the ISO/IEC Guide 98-3, "Guide to the Expression of Uncertainty in Measurement." It is applicable to acceptance testing in such power plants, as well as in any other scenario in which their features must be known.

This standard establishes the measurement instrumentation and techniques for determining the following parameters required for acceptance of complete solar thermal power plant features:

- Available solar radiation
- Plant electricity consumptions
- Net electricity generation
- Non-solar energy
- Net plant performance

Other parameters that characterize the solar thermal power plant system features are not dealt with in this standard, but are the subject of other complementary standards.

This standard is applicable to solar thermal power plants of any size that employ parabolic-trough collector concentrating systems, where the Sun is the main source of energy, and all elements and systems are operative. Such power plants may optionally have non-solar energy sources, such as natural gas or other renewable energies, and a thermal storage system.

Title : Byggritningar – Ritningsnumrering
Scope : Denna standard redovisar principer och koder för numrering av ritningar som används i bygg- och förvaltningsprocesserna. Den omfattar ritningar för husbyggnader med tillhörande

installationer, inredning och utrustning samt markarbeten. Standardens ramverk ger även utrymme för tillämpning inom anläggningsområdet.

Ritningsnumreringen tjänar primärt för identifiering och särskiljande av enskilda dokument. Ritningsnumret skall därför vara unikt i det sammanhang numret används, vilket kan vara ett projekt eller en delprocess i bygg- och förvaltningsprocesserna. Identifieringsbehovet ställer inga krav på strukturerade beteckningar.

Ritningsnumret tjänar även för sortering av utskrivna dokument likväl som datafiler. Därför innehåller numret koder som karakteriserar ritningen – dess typ och innehåll. Betydelsen av dessa koder skall vara uppenbar för en någorlunda rutinerad användare. Det medför kravet att kodernas komplexitet skall vara låg och att ritningsnumret skall innehålla ett begränsat antal tecken. Avsikten är inte att uttömmande beskriva ritningens egenskaper eller beteckna de objekt som ritningen representerar. För det ändamålet fordras mer sofistikerat stöd, till exempel elektronisk dokumenthantering.
