Title : Standard Practice for Visual Appraisal of Colors and Color Differences of Diffusely Illuminated Opaque Materials

Scope : This practice specifies the equipment and procedures for visual appraisal of the colors and color differences of opaque materials that are diffusely illuminated. These specifications are of critical importance in color matching. This practice requires judgments by observers with a minimum of normal color vision. Critical visual appraisal of colors and color differences of materials such as metallic and pearlescent paints requires illumination that is nearly a geometric simulation of sunlight, because such directional illumination permits observation of the sparkle (glitter) and goniochromatism that characterize such materials. Such viewing conditions are beyond the scope of this practice.

 Scope : This revision of national standard will contain new tables of number values for determination of original volumes solely of larch round timber, because the current standard specifies the volume determination of the larch round timber by tables for pine tree. The revision will maintain the existing procedure on the mathematical calculation of volumes. A double bark diameter will be subtracted from the mean diameter of larch round timber measured in bark. The bark diameter will be derived from the empirical material gathered for the purpose of developing of larch volume tables in former Czechoslovakia from 1980 to 1984.

Title : Renovation of existing pipelines, by insertion and polymerization of a composite pipe impregnated with resin - Elements of design and installation

Scope : This standard specifies requirements for the design and the application procedures for the renovation of piping systems and ducting through the inclusion (in the existing pipe) of a composite plastic tube (liner), impregnated with resin and installed using either:

- hydrostatic pressure;
- pneumatic pressure;
- towed;

with polymerization of the resin by circulating depending on the case:

- hot water;
- air-steam mixture;
- radiant energy by emitting UV rays.

The cured plastic composite pipe is continuous and fully adhering to the old pipe. This standard applies for the renovation of gravity and pressure piping in civil and industrial sectors, in particular:
