Title : Method for lactose, glucose and galactose analysis of hard, long ripened cheese
Scope : This technical specification describes the method for analyzing, in hard-long ripened cheese, the content of lactose, glucose and galactose, using High Performance Anion-Exchange Chromatography with Pulsed Amperometric Detector (HPAEC-PAD). This technical specification is applicable to hard cheese in which both the reduction of lactose and the further metabolization of glucose and galactose, naturally occurred during the technological process by the action of microflora.. It is not applicable to dairy products in which the lactose hydrolysis has been obtained by the addition of the beta- galactosidase enzyme, and consequently contain high concentration of glucose and galactose. The method has been validated by only one laboratory.
