Λευκωσία, 15 Ιανουαρίου 2018

ΠΡΟΣ: Όλα τα Μέλη

Κυρία/ε,

Σας επισυνάπτουμε γνωστοποιήσεις από Εθνικούς Οργανισμούς Τυποποίησης, μελών των Ευρωπαϊκών Οργανισμών Τυποποίησης CEN/CENELEC, που περιέχουν τους τίτλους προτεινόμενων εθνικών προτύπων.

Σύμφωνα με την Ευρωπαϊκή Οδηγία που αφορά την πληροφόρηση σε θέματα τεχνικών προτύπων, μπορείτε, αφού μελετήσετε τους τίτλους: α) να ζητήσετε όπως λάβετε ηλεκτρονικά ολόκληρο το κείμενο του προσχεδίου εθνικού προτύπου, εάν αυτό είναι διαθέσιμο, β) να συμμετάσχετε στις συναντήσεις της τεχνικής επιτροπής του Εθνικού Οργανισμού Τυποποίησης που ετοιμάζει το προσχέδιο προτύπου και γ) να υποβάλετε εισήγηση στον CYS, να αρχίσει τυποποιητική εργασία σε Ευρωπαϊκό επίπεδο σχετικά με το θέμα της γνωστοποίησης, εάν φυσικά πιστεύετε ότι το εν λόγω εθνικό πρότυπο θα επηρεάσει την ελεύθερη διακίνηση προϊόντων ή την κυπριακή βιομηχανία και οικονομία.

Τυχόν σχόλια και παρατηρήσεις παρακαλώ όπως υποβάλλονται στον Κυπριακό Οργανισμό Τυποποίησης. Σε περίπτωση που δε λάβουμε καμία ανταπόκριση, ο CYS δε θα φέρει ένσταση στην προώθηση των υπό αναφορά εθνικών προτύπων.

Για περισσότερες πληροφορίες μπορείτε να επικοινωνείτε με την κα. Μαριλένα Νικολάου, Λειτουργό Διοίκησης και Διεθνών Σχέσεων του Κυπριακού Οργανισμού Τυποποίησης (CYS), τηλ: 22 411439, Φαξ. 22 411511 και στην ηλεκτρονική διεύθυνση: m.nicolaou@cys.org.cy

Με εκτίμηση,

Ανδρέας Ανδρέου,
Διευθυντής Βιομηχανίας,
για Γενικό Γραμματέα.

/ΜΚ.

ICS :
National Ref : PNE 178502
Title : Indicators and tools of smart tourist destinations.
Scope : This standard specifies a set of indicators and tools, associated with the governance and the axes of an intelligent tourist destination (governance, innovation, technology, universal accessibility, sustainability), for its application in the management of intelligent tourist destinations, so that efficiently serve for decision-making by the managing body of the destination and by those responsible for the processes or activities affected and, consequently, contribute to the improvement of the destinations.

In line with the introduction of the UNE 178501 standard, the objective of this standard is to provide a logical framework of work for managers of tourist destinations, which not only improve their management systems, processes and documentary records, but providing them with a battery of indicators and tools that allow them to interact with tourists and obtain information during all phases of the tourist trip cycle.

This standard establishes a logical model applicable to any tourist destination that undertakes a process of digitization and technification of its processes and services, as well as a measurement of its performance in a comparable and verifiable way, regardless of its size and location.

This standard has been designed to be used in conjunction with the UNE 178501 Standard, although it can also be used independently.

ICS :

National Ref : PNE 178501

Title : Management system of smart tourist destinations. Requirements

Scope : This standard specifies the requirements to establish, implement, maintain and improve a management system for a Smart Tourist Destination that adequately considers governance, innovation, the use of technologies, universal accessibility and sustainability in said destination. It is applicable to all types of tourist destinations, regardless of their conception (holiday, urban, natural, etc.), size (municipal or supramunicipal) and nature of their Managing Body.

This standard has been designed to be used independently, although it can be aligned or integrated with other management systems.

This standard can be used to demonstrate compliance with the requirements established in it against a third party.

National Ref : ÖNORM A 2053
Title : Data base for the proof of suitability - Structure and content
Scope : This Austrian Standard contains the definitions and criteria for the standardization of databases for the proof of suitability of economic operators (companies) and the data contained in these databases. This standardization enables the user to rapidly assess the suitability of economic operators by a traffic light system which is based on essential criteria. Therefore, this Austrian Standard supports the mutual recognition between national databases among the individual EU Member States as provided for in Directive 2014/24/EU. By means of a standardized national data collection, the data become easier to use throughout Europe (once only principle). The participant/user is provided with a consistent information point ç an (European) çone-stop-shopç.
 Furthermore, the practical design of the databases for the proof of suitability is defined in detail. Based on the relevant EU directives and the Austrian Federal Procurement Act, this standard establishes a standard which grants Austrian companies the opportunity to prove their suitability in the same way as companies from other countries where national databases already exist.

National Ref :	ÖNORM B 2118		
Title :	General conditions of contract for works of building and civil engineering construction with partnership model, particularly for the execution of major construction - Contract to provide services		
Scope :	Clauses 5 to 12 of this Austrian Standard give the general terms of contracts for works of building and civil engineering construction using a partnership model. This ÖNORM applies to major constructions and complex building projects. Jointly with the standards to be quoted in the contract (e.g. Austrian Standards with technical content), the provisions of this ÖNORM are intended to represent the consistent terms of building contracts. The relevant particular conditions for individual cases shall be specified by the building works themselves as well as by the specific circumstances of the performance delivery. This ÖNORM does not apply to consumer transactions.

ICS :	01.040.93, 93.160		
National Ref :	ÖNORM B 4800		
Title :	Protective structures for torrent control		
Scope :	The regulations of this ÖNORM shall be applied to torrential barriers made of unreinforced or slightly reinforced concrete and reinforced concrete as well as flexible structures for the protection against torrential hazards. This ÖNORM only applies to the design of new protective structures. These structures can additionally contain structural components made of steel and / or wood.		

This standard forms the basis for a standardized procedure for the design, planning, construction, operation, monitoring and maintenance of transverse and longitudinal protective structures of the torrent control, however, can also be applied to other protective structures of the torrent control.

Explicitly excluded from the scope of this ÖNORM are protective structures, which are primarily used for flood retention.

National Ref : ÖNORM B 4801
Title : Permanent technical avalanche protection
Scope : This ÖNORM is applicable for all protective structures in the range of permanent technical avalanche protection. It determines designations, definitions and procedure for the determination of static and dynamic effects for avalanche protective structures. This ÖNORM regulates the protection structures in avalanche starting zones (snowpack-stabilizing works, and snow drift construction), measures in the avalanche track and in the avalanche deposition area (eg avalanche catching and deflection dams, avalanche protection galleries). The regulation provides the basis for a consistent approach to the monitoring, control and maintenance of avalanche protection structures.

National Ref : ÖNORM S 5295-1
Title : Radiotherapie treatment planning systems - Part 1: Acceptance testing of functional performance characteristics
Scope : The present ÖNORM S 5295-1 is a revision of the existing ÖNORM S 5296. The standard is applicable for acceptance testing before clinical operation after Installation, maintenance and modification of radiotherapie treatment planning systems for teletherapy or brachytherapie. The objective of the acceptance testing is to state compliant installation according the manufacturer's instructions, to state operational reliability according clinical requirements of the user, to ensure accurate system configuration by user or manufacturer, to define Parameter for following constancy testing. According MedStrSchV a radiotherapie treatment planning system is an additional component to a radiological unit and has therefore to be subjected to (partial) constancy testing.

Title : Radiotherapie treatment planning systems - Part 2: Constancy testing of functional performance characteristics
Scope : The present ÖNORM S 5295-2 is a revision of the existing ÖNORM S 5295. The standard covers constancy test methods and related test conditions as well as test frequency for quality characteristics of radiotherapie treatment planning systems to determine changes in these quality characterists. The test shall ensure that the specified tolerances are kept during the wohle operating life as well as to demonstrate the proper function of the hardware components of the radiotherapie treatment planning system

Title : Ventilation and air conditioning plants for locations for medical use - Design, construction, operation, maintenance, technical and hygienic inspections
Scope : This Austrian Standard applies to ventilation and air conditioning systems and their components in buildings and rooms used for health and social purposes, where medical examinations, treatments and surgical interventions on persons are carried out. This includes Hospitals and other according to KAKuG (Krankenanstalten- und Kuranstaltengesetz) authorized institutions, i.e. dialysis centres, ambulatories, convalescent homes, sanatoriums, rehab hospitals and care facilities. The scope of this ÖNORM also includes operation, maintenance as well as hygienic, technical and economic inspections of ventilation and air conditioning systems. Additionally it gives notes for ventilation and air conditioning systems for non-medical use.

Title : Plastics piping systems for hot and cold water installations - Polypropylene (PP) - Part 1: General (Amendment)
Scope : This part of ISO 15874 specifies the general aspects of polypropylene (PP) piping systems intended to be used for hot and cold water installations within buildings for the conveyance of water whether or not intended for human consumption (domestic systems), and for heating systems, under design pressures and temperatures according to the class of application. It covers a range of service conditions (classes of application), design pressures and pipe dimension classes. It also specifies the test parameters for the test methods referred to in this part of ISO 15874. In conjunction with the other parts of ISO 15874, this part of ISO 15874 is applicable to PP pipes, fittings, their joints and to joints with components of other plastics and non-plastics materials intended to be used for hot and cold water installations. This part also contains national requirements on the options contained in ÖNORM EN ISO 15874-1 to -5, requirements on self-surveillance as well as information on the recommended conformity criteria.

Title : Road vehicles. Criteria for the assessment of the equivalence of braking efficiency test methods in relation to the methods defined in ISO 21069

Scope : Directive 2010/48/EU allows the use of alternative inspection test methods to obtain the braking efficiency of a vehicle to those defined in ISO 21069. There will be considered equivalent methods those that measure the vehicle brake efficiency obtaining the maximum braking forces developed by fully loaded vehicles. For this purpose, a roller brake tester can be used with the vehicle unloaded or partially loaded. Additionally, calculation and/or simulation methods can be used, provided that they generate results comparable to those resulting from testing the vehicle at fully load condition in a roller brake tester. The purpose of this standard is to establish the criteria for the assessment of the equivalence of braking efficiency test methods, other than those specified in ISO 21069. These methods can be considered equivalent or not in terms of the results obtained measuring braking forces at full load, ensuring that they generate comparable measurement results that will lead to a reliable assessment of the vehicle brake efficiency of the service braking system. The scope of this assessment will be defined by the vehicles categories to which the proposed method is applicable.

Title : Road traffic management equipment. Data quality. Exchange of information between control centres. Part 1: functional specification.
Scope : Provide a standardized platform through which traffic parameters, meteorology and

signaling in real-time can be stored, as well as any other information that can be used in traffic management, allowing different systems to exchange information and historical and statistical information query.

Title : Road traffic management equipment. Maintenance. Recommendations for maintenance. Part 1. Recommendations for preventive maintenance of metallic structures
Scope : This UNE report aims to serve as a guide for control operations in the maintenance of metal structures and civil works of vertical dynamic signalling that are part of the set of elements that make up the equipment of a road, in order to maintain the facilities in good condition from the actions to be carried out in each of the structures.

The purpose of this report is to define and specify the inspections to be carried out, as well as to propose a format for the collection of information with which to report possible incidents to the competent body, not including in the scope of this report the possible corrective actions to commit.

This report also proposes a periodicity of the inspections to be carried out, which is defined by contemplating a new structure. In the case of an existing structure for which there is no evidence that the inspections defined here have been carried out, it will be necessary to carry out a specific inspection that generates a "zero date" from which the inspections and frequencies indicated in this report. Some recommendations for this specific inspection are included in Annex B.

Also included in Annex C, some acceptance and rejection criteria (tolerance) for some of the inspections indicated in this report.

Title : Equipment for traffic management. Maintenance. Recommendations for Maintenance. Part 2: Recommendations for Preventive Maintenance of Equipment.
Scope : This UNE report aims to set, over time, the tasks to be performed for proper preventive maintenance of different equipment and elements installed by the Directorate General of Road Traffic.
The following document is divided into two parts, a first in which the preventive actions to be carried out are listed ("LIST AND PERIODICITY OF PREVENTIVE MAINTENANCE TASKS FOR TRAFFIC MANAGEMENT TEAMS") and a second in which explains more each of them ("DESCRIPTION OF MAINTENANCE TASKS").

Title : Universal database for mobility management. Part 2. Data exchange between Zonal Traffic Management Centres and Central Traffic Management Centre. Functional specification.
Scope : Defines the method for information exchange between a traffic control centre of zone or region (Zonal Traffic Centre) and a control centre of central traffic (Centre of Centres). The procedure is focused on ensuring the availability of information in the centralized database in the Centre of Centres. Centres traffic management systems submit real-time information (state and data supplied by equipment) and historical (data and/or alarms).

Title : Smart cities. Infrastructures. Public Service Networks. Part 2: Waste Networks.

Scope : The purpose of the series of standards UNE 178101 is to define metrics applicable to public service networks: water, waste, energy (electricity and gas), telecommunications and transport, in order to provide the best services to citizens, while at the same time maximum efficiency and easy integration into the environment. All this within the framework of smart and sustainable cities.

In particular, part 2 of the UNE 178101 series of standards defines the metrics applicable to the networks of the public waste service of a city.

The scope of this standard is the management systems (networks) of urban waste, whose management falls in the city councils of more than 5000 inhabitants according to the established in the article 26 of the Law 7/1985, April 2nd , regulator of the Bases of the Local Regime, that provide the services of collection and treatment of urban waste according to the regulations applicable.

The metrics included in this document are understood in the context of smart cities, so their application is restricted to this field. This means that both the achievement and improvement of the reference values that are set, as well as the provision of the necessary information for the calculation of the metrics, must be supported by a technologically advanced environment in which a use is made and promoted. intensive use of information and communication technologies. Given the extensive application of the mentioned technologies in the construction and operation of these networks and the progress of these, it will be necessary to review these metrics over time. Thus, the base of indicators is established for the environment of 2018, with an annual data collection and a scenario of possible revision in 2023.

**REGISTER OF NEW NATIONAL STANDARDIZATION INITIATIVES
NOTIFIED UNDER SUBSECTORS IN THE SCOPE OF CENELEC**

December 2017

Issued on : 5 January 2018

Information Procedure on Standards

Notifications registered at CCMC during December 2017

Sector U : GENERAL ELECTROTECHNICAL STANDARDS

Register issued on : 5 January 2018

Subsector U12: RELIABILITY

Subsector : U12 Registration Date : 2017-12-11
Organization : UNE
Country : Spain Latest Date for Comments : 2018-01-18
Project ID : P0049336/0001 Draft for public enquiry
ICS :
National Ref : PNE 200008 IN
Title : Qualification of technical and management personnel in the field of Dependability and Industrial Safety engineering (RAMS Engineer)
Scope : The purpose of this document is to define, on the one hand, the activities that RAMS professionals can develop and, on the other hand, the knowledge and skills of the staff that carries them out, according to the functional profiles established in this document and in that their capacity to efficiently execute said activities is guaranteed.

Relatedness :

Subsector Z99: UNDETERMINED

Subsector : Z99 **Registration Date :** 2017-12-11
Organization : UNE
Country : Spain **Latest Date for Comments :** 2018-01-18
Project ID : P0044213/0001 **Draft for public enquiry**
ICS :
National Ref : PNE 178101-2
Title : Smart cities. Infrastructures. Public Service Networks. Part 2: Waste Networks.
Scope : The purpose of the series of standards UNE 178101 is to define metrics applicable to public service networks: water, waste, energy (electricity and gas), telecommunications and transport, in order to provide the best services to citizens, while at the same time maximum efficiency and easy integration into the environment. All this within the framework of smart and sustainable cities.

In particular, part 2 of the UNE 178101 series of standards defines the metrics applicable to the networks of the public waste service of a city.

The scope of this standard is the management systems (networks) of urban waste, whose management falls in the city councils of more than 5000 inhabitants according to the established in the article 26 of the Law 7/1985, April 2nd, regulator of the Bases of the Local Regime, that provide the services of collection and treatment of urban waste according to the regulations applicable.

The metrics included in this document are understood in the context of smart cities, so their application is restricted to this field. This means that both the achievement and improvement of the reference values that are set, as well as the provision of the necessary information for the calculation of the metrics, must be supported by a technologically advanced environment in which a use is made and promoted. intensive use of information and communication technologies. Given the extensive application of the mentioned technologies in the construction and operation of these networks and the progress of these, it will be necessary to review these metrics over time. Thus, the base of indicators is established for the environment of 2018, with an annual data collection and a scenario of possible revision in 2023.
