jointly with the ÖNORM EN 1991-1-4. This ÖNORM set rules for the determination of natural wind actions for the design of buildings and engineering structures for each considered load platen. This part is suitable for predicting the characteristic wind loads for buildings standing on land, their components and attachments. Various aspects that need to be considered for the determination of the effects of wind on a building depend on the location and the availability and quality of meteorological data, terrain category and so on. This part contains no evidence to account for local thermal effects on the wind characteristics, such as strong Arctic inversion layers, channeling or hurricanes.

**Scope :** This test method covers the determination of iron in the range from 1 to 100 µg.  
This test method is intended to be general for the final steps in the determination of iron and does not include procedures for sample preparation.  
This test method is applicable to samples whose solutions have a pH less than 2. It is assumed that the pH is adjusted to within this range in the sample preparation.  
Review the current Safety Data Sheets (SDS) for detailed information concerning toxicity, first-aid procedures, handling, and safety precautions.

**Title :** Standard Test Methods for Specific Gravity, Apparent, of Liquid Industrial Chemicals  
**Scope :** These test methods cover the determination of the specific gravity, apparent, of liquid industrial chemicals. Two test methods are covered as follows:  
Test Method A, specific gravity, apparent, by means of a hydrometer.  
Test Method B, specific gravity, apparent, by means of a pycnometer.  
Note 1—Test Method D 4052 describes an instrumental procedure.  
In common usage the term specific gravity, apparent, is understood to mean specific gravity. Since this test method is to be in conformity with Terminology E 12, all terms reading specific gravity were changed to specific gravity, apparent, without altering the meaning of specific gravity and, the term apparent could be dropped in everyday operations after establishing the use term equivalency.

**Title :** Bar coding application for the coding for electrical energy meters.  
**Scope :** The purpose of this standard is to establish the type of bar code or two-dimensional code to be used in the marking of measuring equipment and its accessories, as well as the characteristics to be encoded and the format and size of the information code.  
 The indications contained in this standard shall apply to measuring equipment, associated devices and accessories that are to be installed in Spain for the measurement of the electric power supplied or generated at power supply points.  
 Specifically, they will apply to:
 

- direct connection and indirect connection electric power meters
- prects for meters and electrical measurement equipment
- transformers for billing customers in low voltage and medium voltage (voltage less than or equal to 33 kV) or for internal control uses of the distribution network
- modems and routers for electric power telemetry
- data concentrators for smart metering
- PLC signal filters for intelligent measurement
