 Title : Determination of Total Phosphorous and P-orthophosphate in waste, natural and drinking waters with small-scale sealed-tube method.

Scope : Phosphorus, which comes from both natural and anthropogenic sources (especially civil and industrial waste), can give rise to eutrophication phenomena. The use of orthophosphates (expressed as P₂O₅) is allowed up to the limit of 5 mg/L for the treatment of water intended for human consumption, while the use of phosphonates, also present on the market, for the same purpose is not allowed. Consequently, the P concentration in the waters is carefully monitored. This Standard describes the use of a small-scale sealed-tube method for the determination of phosphorus in natural waters with a saline concentration of <1.5% (m/m), drinking waters, waste waters and industrial waste waters in the range 0.05 - 20 mg /L (expressed as P).

 Title : Determination of Permanganate Index in waste, natural and drinking waters with small-scale sealed-tube method.

Scope : Permanganate index is a conventional measure of contamination due to oxidizable inorganic substances and organic material in the water sample. The latter could create, after the sanification processes, some carcinogenic by-products which are harmful to human health such as trihalomethanes or halogenic acetic acids. It is a conventional index that measures the reducing properties of water. This standard describes the determination, by means of a small-scale sealed-tube method, of the permanganate index (expressed as mg/L of oxygen) in drinking waters, surface waters, groundwater, natural mineral waters, and also the pool waters. The applicable concentration range is generally between 0.5 and 10 mg/L of oxygen.

Title : Determination of Total nitrogen - UV Spectrometry Method after oxidative digestion with sodium persulphate by means of the Flow Injection Analysis (FIA) .

Scope : Nitrogen is one of the main elements contributing to water eutrophication. The main sources of nitrogen are both natural and anthropogenic. Among the latter, particular importance is to be assigned to civil discharges and fertilizers. The abatement of the nitrogen load present in the drains can be achieved in the purification plants through denitrification processes. The method describes a process for the determination of total nitrogen, after oxidative digestion and hydrolysis and UV spectrometric measurement of the nitrates. The method is applicable to drinking waters, surface water, saline waters with a maximum salt concentration of 1.5% (m/m) and waste waters (with suspended solids up to 2 g/L). Total nitrogen concentrations between 0.5 mg/L and 200 mg/L can be determined directly; higher concentrations require a dilution.

Title :

Non-regulated professions – Ergonomist – knowledge, skill and competence requirements

Scope :

The standard defines the requirements related to the professional activity of the ergonomist, the professional figure who deals in objects, services, and environment design, in order to improve the quality of living and working conditions, taking account the man needs, his capabilities and, finally, the environmental, technological and organizational context., with the aim of improving the quality of living and working conditions. The objective is to assess potential critical issues when operating with environments and tools which do not take into account human characteristics, its limits, needs and abilities.

To achieve this goal, the ergonomist should be able to properly manage knowledges and methodologies coming from various disciplines, at a general or specific grade, depending on the level of detail required. Ergonomists are professional who have a knowledge of the principles of ergonomics and of the relevant human characteristics in the areas of anatomy, physiology, psychology and social organisation, as well as knowledge of how the physical environment affects people and their performances. The standard specifies knowledges, skills and competences that the ergonomist must have, taking into account The European Qualifications Framework, in order to facilitate and make uniform the process of assessment and validation of learning outcomes acquired by the aspirant ergonomist and, finally, to enhance the experience even outside of the national borders.
