Not included in this ÖNORM are - design and execution of roof waterproofing (see ÖNORM B 3691), - design and execution of pond or swimming pool waterproofing, - design and execution of structural components with water impermeable concrete, - design and execution of waterproofing with bentonite and highly reactive Spray-On waterproofing, - drainage and backfilling of the excavation. Waterproofing with force-locked connection with asphalt concrete protection layer are regulated by the RVS 03.15.12. The procedural and contractual provisions governing the execution of building seals are regulated in ÖNORM B 2209.

Title : Determination of granulometry of grated cheese
Scope : This technical specification describes the method for evaluating the granulometry of hard and semihard cheese, having a moisture content lower than 36%. The method is based on the sieving of cheese by using a mechanical tool which allows the cheese to pass through a series of sieves of progressively smaller mesh size, from 2 to 0,25 mm. Each sieve is then weighed to obtain the amount of cheese that was stopped by each sieve, as a fraction of the whole cheese mass.
