Title : Asbestos containing materials - Methods and criteria for identification in buildings, machines and machinery
Scope : Employers, owners and building managers are imposed to identify asbestos-containing materials in order to carry out preventive and protective measures for this risk factor. This kind of obligation is extended to the servicing installations but many materials are still placed on machines and production plant.
The census is especially complicated by the fact that at the time of the asbestos ban were marketed about 3000 different products containing this material.
The identification of asbestos containing materials is a very important activity both for the related risk management implications, and for the possible effects of the wrong classification of the materials or their incorrect identifying.
Up to date no technical body has governed and shared this delicate activity, however, it is regulated only for building structures with a regulatory framework long gone.
A methodological approach for asbestos surveying is needed to standardize the approach and methods adopted. The existence of a national standard could be of help to the necessary path god modernization of national legislative sources.
