**Title :** Cement - Composition, specifications and conformity criteria for low alkali common cements (LA)  
**Scope :** The current SS 134203 limits the use of new more climate-friendly alternatives. In order to be able to use more environmentally friendly cement, while maintaining the level of safety against alkali silica reactions, the standard needs to be updated. Clarifications are also

needed indication of the mean value, where today it is not really clear how this mean value is to be produced and specified.

The Swedish standards in the cement area mainly consist of European standards that have been established as Swedish standards. This standard that we are revising complements SSEN 1971: 2011 and is intended to be used in conjunction with it. This standard follows the outline in SSEN 1971: 2011. If there are Swedish choices and additions under a section, all parent headings are included.

This standard replaces SS 134203, edition 1.

SSEN 1971: 2011 does not include requirements for low alkali content for ordinary cement, which is why this standard has been developed for the Swedish market. This edition includes an extension of Table 1 to now include differentiated requirements for CEM II / AS, CEM II / BS, CEM II / AD, CEM II / AV, CEM II / ALL and CEM II / AM.

Other changes to the previous edition are, in addition to editorial changes that make it easier for the reader to recognize the outline and writing style from the overarching standard SSEN 1971: 2011, that the definitions have been rewritten to better correspond to the defined concepts.

Requirements and test methods.**Scope :** This document specifies the technical requirements and establishes the test methods for fibre-cement profiled sheets incorporating PUR and polyester coating at the bottom, and its fittings.

This document covers fibre-cement profiled sheets that incorporate in a second production process a PUR layer between the fibre-cement and a polyester coating placed at the bottom. This is done by means of an individual injection system. The final product is a slab with better mechanical characteristics and more anti-corrosive resistance.

For the purpose of this document, fibre-cement profiled sheets are classified according to

their height of corrugation and their mechanical characteristics.

This document does not include calculations with regard to works, design requirements, installation techniques, wind uplift or rain proofing of the installed sheets.

Standarden ger anvisningar för provning av ett rörs förmåga att tåla slag med fallkropp. För provningen erforderliga uppgifter om provningstemperatur, fallviktens massa och spetsradie samt antal provstycken ges i aktuell produktstandard.

This part of EN 12201 specifies the characteristics of pipes made from polyethylene (PE 100, PE 80 and PE 40) for buried and above ground applications, intended for the conveyance of water for human consumption, raw water prior to treatment, drainage and sewerage under pressure, vacuum sewer systems, and water for other purposes. It also specifies the test parameters for the test methods referred to in this standard. In conjunction with Part 1 and Parts 3 to 5 of EN 12201, it is applicable to PE pipes, their joints and to joints with components of PE and other materials intended to be used under the following conditions: a) allowable operating pressure, PFA, up to 25 bar; b) an operating temperature of 20 °C as a reference temperature; c) buried in the ground; d) sea outfalls; e) laid in water; f) above ground, including pipes suspended below bridges. EN 12201 covers a range of allowable operating pressures and gives requirements concerning colours and additives. It covers three types of pipe: - PE pipes (outside diameter dn) including any identification stripes; - PE pipes with co-extruded layers on either or both the outside and/or inside of the pipe (total outside diameter dn) as specified in Annex B, where all layers have the same MRS rating; - PE pipes (outside diameter dn) with a peelable, contiguous thermoplastics additional layer on the

outside of the pipe ("coated pipe") as specified in Annex C.

<b>Title :</b>	Guidance on the selection of distribution cables. Part 1: Cables with rated voltages of 0,6/1 kV		
<b>Scope :</b>	This standard establishes the rules to determine the conductor section of the cables with a rated voltage equal to 0.6 / 1 kV, for electric power distribution circuits.		

Starting from some installation conditions considered as type, the admissible currents in permanent regime for cables in common use and the correction factors are tabulated to calculate the admissible currents in conditions other than the type conditions (see annexes A, B, C and D).

The power distribution cables that are considered in this standard are:

Designation	Reference standard
RV	UNE-HD 603-5N
XZ1 (S) and XZ1 (AS)	UNE-HD 603-5X
RZ	UNE 21030-1 for Al UNE 21030-2 for Cu

NOTE Although the intended application of this standard is electrical power distribution cables, the Annexes have also tabulated allowable currents for more sections and types of conductor than those standardized in the aforementioned reference standards.

Cables for special applications that have their own application regulations, such as cables for ships, mines, submarines or for nuclear power plants are not considered in this standard.

**Title :** Guidance on the selection of distribution cables. Part 2: Cables with rated voltages above 0,6/1 kV  
**Scope :** This standard establishes the rules to determine the rated voltage and the section of the conductor and screen of cables with a rated voltage greater than 0.6 / 1 kV, with special attention to cables up to 18/30 kV, for distribution circuits. of electrical energy.

Starting from some installation conditions considered as type, the admissible currents in permanent regime for cables in common use and the correction factors are tabulated to calculate the admissible currents under conditions other than the type conditions (see annex A).

The power distribution cables that are included in this standard are:

Designation	Rated voltage	Reference standard
RHZ1 and HEPRZ1	from 3.6 / 6 kV to 18/30 kV	UNE-HD 620 (-9E, -10E)
RH5Z1	12/20 kV and 18/30 kV	UNE 211620

NOTE Although the intended application of this standard is electrical power distribution cables, in annex A allowable currents have also been tabulated for more sections than those standardized in the aforementioned reference standards. Therefore, the given values of maximum allowable current can be applied, with particular attention to the installation conditions, to cables with similar construction types for industrial applications.

Cables for special applications that have their own application regulations, such as cables for ships, mines, submarines or for nuclear power plants are not considered in this standard.
