 Title : Quality criteria for training firms  
 Scope : A training firm is a firm belonging to a system, to train skilled employees. It collaborates with other training firms in a network and resigns from dealing with real money, i.e. the exchange of goods, services and money is virtual and without real risk. For almost every sector there are training forms, e.g. IT-services and catering services. Training firms and their employees buy and sell goods and/or services on a virtual level. Usually a training firm is divided into different departments, e.g. marketing, financing and sale. In Austria training firms are used to prepare or to train the access to employment, occupational come-back and change among other things. They are operated by schools and by organisations for adult vocational training.

**ICS :** 65.020.40  
**National Ref :** ÖNORM L 1122  
**Title :** Tree inspection and tree care  
**Scope :** This standard is to be used for the control and care of individual trees and forest-like tree-stocks, or where traffic safety requires it.  
It contains information for the creation of service specifications.  
This standard does not apply to forest areas according to the Forstgesetz 1975.  
As a supplement to the following standards, this standard contains measures that are to be taken in connection with the control and care of trees for the execution work in the tree's environment and on the actual tree:  
— ÖNORM B 2241, Gartengestaltung und Landschaftsbau - Werkvertragsnorm,  
— ÖNORM L 1050, Boden als Pflanzenstandort - Begriffe und Untersuchungsverfahren,

---

---

— ÖNORM L 1110, Pflanzen - Güteanforderungen, Sortierungsbestimmungen,

— ÖNORM L 1120, Gartengestaltung und Landschaftsbau - Pflegearbeiten.

The regulations of this standard serve the purpose

— to design project-specific solutions in accordance with the implementation;

— to carry out maintenance measures in accordance with the state of the art;

— to standardize services to produce traffic safety through trees and improve the comparability of offers.

Trees are characterized by a natural lightweight construction and do not offer absolute static reliability in terms of stability and / or breakage security. The effects of extraordinary events such as e.g., strong winds, floods and snow loads, are only partially predictable. Green branch breaks and cladoptoses (natural branch and trunk cleaning) cannot be foreseen. Therefore, tree control cannot exclude all natural dangers.
