These examples meet the requirements of this ÖNORM with sufficient certainty that deviations (e.g. of layer thicknesses) as a result of permissible tolerances (according to the respective product standards) are covered. But not only the building structures shown in the supplementary sheet have a verification effect, but all building structures that deviate from the examples shown in a permissible manner (according to point 3 of this supplementary sheet).

a distinction is made between the following basic construction methods:

- not ventilated, without inner installation level (NHOI)
- not ventilated, with internal installation level (NHMI)
- ventilated, without inner installation level (HOI)
- ventilated, with internal installation level (HMI).

The heat transfer coefficients correspond to the current, average constructions on the market and do not represent high insulation for almost zero-energy houses or passive houses.

The references mentioned in the preliminary remark mean that on the one hand the heat transfer resistances from ÖNORM EN ISO 6946: 1997 must be used to calculate the U-values or  $\psi$ -values. According to the new edition of ÖNORM B 8110-2, the values from ÖNORM EN ISO 13788: 2002 are to be used to calculate the evidence of the avoidance of surface condensation. The above-mentioned comparability with supplement 2 is also offered. Noise protection and fire protection requirements are not dealt with in this standard.

 The standard specifies a formal generic structure independent of the publishing media and it proposes means of presenting entries in print and electronic dictionaries. The relationship between the formal structure and the presentation of entries used by publishers and read by users is explained in examples provided in the informative annexes.  
 The objective of this International Standard is to facilitate the production, merging, comparison, extraction, exchange, dissemination and retrieval of lexicographical data in dictionaries. Following a lexicographical lemma-oriented approach, it does not deal with concept-oriented works as defined in ISO 704.
