 Title : Health Informatics - Consent management system in the healthcare context - Overview  
 Scope : The technical report provides an overview of centralized management of consent and patient privacy. The aim is representing a guide to support healthcare organizations in favoring the development of software systems compliant to the main international standards of medical informatics and fully compliant with the GDPR (General Data Protection Regulation). In the healthcare sector, for there to be an environment for sharing information based on consolidated healthcare IT standards such as those referred to in the IHE (Integrating the Healthcare Enterprise) profiles, and those currently being finalized at the ISO (International Organization for Standardization), each system must consider the patient's informed consent as a fundamental element.  
 In this context, a consent management system represents the central element between the entity that produces the document and collects the patient's choices, between the entity that keeps the document and the entity that must, for various reasons, access the information in the document.
